Verification of data:

Independent verification of LCA data and other environmental information in this declaration is performed by Professor Annik Magerholm Fet, Global & Local in accordance with ISO 14025 § 8.1.3.

Verified by:

Annik Magerholm Fet

This declaration has been compiled by:

Siv.Ing. Kjetil Wiig (Savo) and Christofer Skaar (NTNU)

PCR: Product category rules for seating (NPRC003, 2008)

About the EPD:

EPDs from other program operators than EPD-Norge are not necessarily comparable

Key performance indicators

From raw material extraction to use:

Global warming: 108,68 kg CO₂-Eq.
Energy consumption: 1774,05 MJ
Guarantee period: 5 years

Information about the producer:

EFG European Furniture Group AB
Trehörnavägen 2, Box 1017, 57328 Tranås
Telephone: (+46) 140-67 600
Fax: (+46) 140-31 14 02
www.efg.se

Org.no.: 556236-7259

Information about the product: Savo XO ML (version with medium back, aluminium base and armrests). The chair is also available with plastic base, higher back and headrest.

Functional unit: Seating produced and maintained for 15 years

Included life cycle stages: This declaration covers environmental impacts from raw material extraction to use and maintenance. The declaration does not cover product disassembly or disposal, and is therefore not comparable to declarations that cover the entire product life cycle (see Table 1 and Figure 6)

Performance year: 2009

Data development year: LCA-data is generated with the aid of GaBi 4 in the period 2008-2009

Assumed market: Europe

Additional information

This environmental product declaration has been created according to the product category rules for seating.

The lifetime of an average piece of furniture is estimated to be 15 years according to the PCR. This is the average lifetime in the possession of the first consumer. The furniture will usually have longer technical lifetime.

Savo XO is approved according to EN-1335
(Dimensional, performance and safety requirements for office work chairs used 8 hours a day)

EFG is ISO-14001 certified.

Treatment of wastes from the final product

Figure 4 and 5 shows the assumed waste management based on the material composition from Table 1. The waste management are based on Norwegian statistics for waste management. This statistics shows an average recycling percentage, while the share of recyclable material in the product is more than 90%.

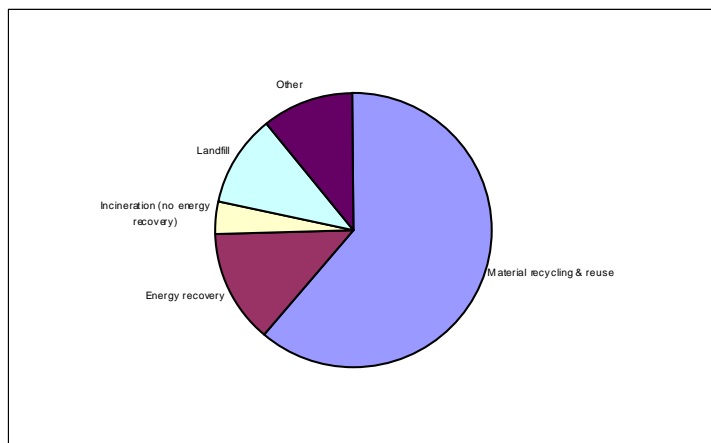

Figure 4: Waste management for Savo XO.

Figure 5: Statistical waste management for different materials [SSB].

Methodological decisions

Figure 6: System boundaries. See table 1 for specification of system boundaries for this declaration.

- Cut-off criteria:** Processes and activities that contribute to less than 1 % of the total environmental impact for any impact category can be omitted.
- Use phase:** The use phase are based on vacuum cleaning every second year for 15 years. (A total of 1,125 MJ)
The transport to the market/customer (before the use phase) is also included in this declaration, and is set to an average of 500km
- Disposal phase:** Not included (see previous page and above for waste management)
- Allocation rules:** For virgin resources are raw materials and production processes included. The recycling process is included for input of recycled resources. Where economic allocation has not been possible, the allocation has been based on production volume. Detailed information on allocation is available in the documentation for the Norwegian Furniture Database.
